

VAMS

The Sovereign Brain

The 'AWS of Web3' for the Agentic Economy.
Any Agent. Any Chain. One Stack.

STATUS: PRE-SEED / ARCHITECTURE LOCKED (v0.3.0)

THE AGENTIC IMPERATIVE

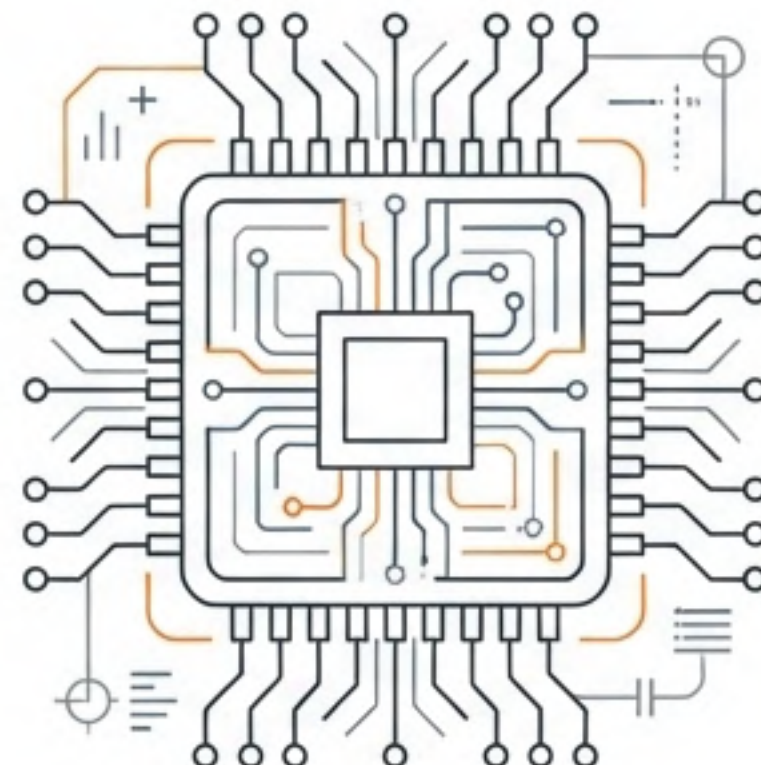

Why autonomous software cannot survive on today's infrastructure.

THE HUMAN USER

- ✗ Tolerates 12s block times
- ✗ Manages 10+ wallets manually
- ✗ Handles gas volatility & slippage
- ✗ Bridges assets via external UIs

THE AI AGENT

- ✓ Requires sub-second feedback loops
- ✓ Needs single-token API simplicity
- ✓ Requires stable economic planning
- ✓ Demands atomic, cross-chain execution

\$50 Billion in Infrastructure. <1% Utilization.

The DePIN ecosystem is powerful but functionally siloed.

Protocol	Capacity	The Friction
io.net / GPU	20k+ GPUs Available	No native agent payment rails.
Akash / CPU	\$0.02/hr Hosting	Requires complex Kubernetes setup.
Celestia / DA	Infinite Scale	Deep technical integration friction.
Bittensor / AI	Global Intelligence	Closed ecosystem isolation.

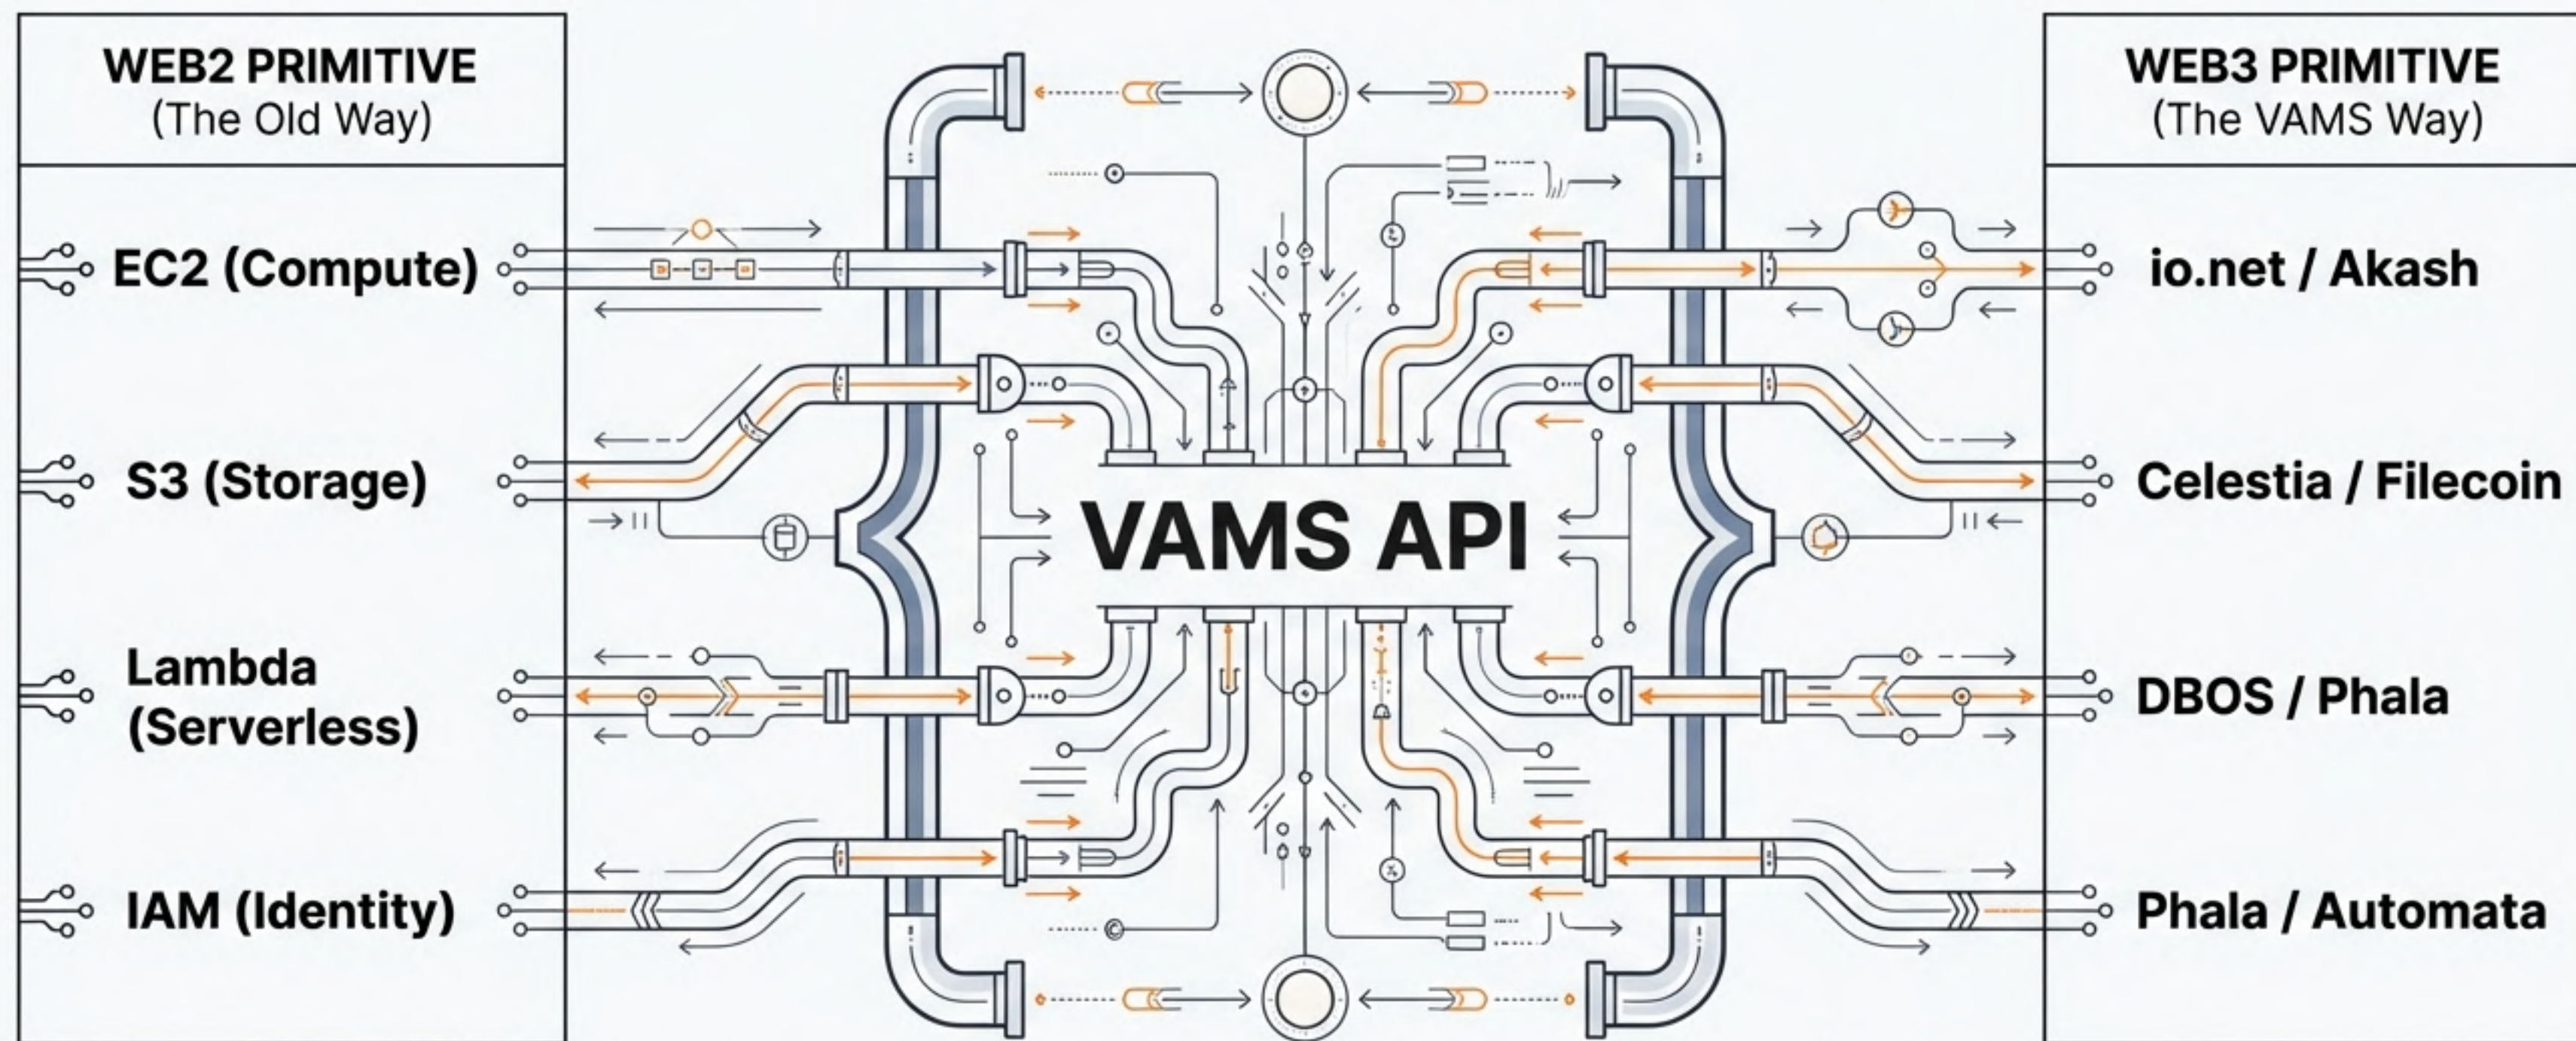

THE GAP

Developers currently manage separate integrations for every layer.

VAMS is the "Meta-Layer" that unifies them.

VAMS: A Layer 3 Meta-Architecture

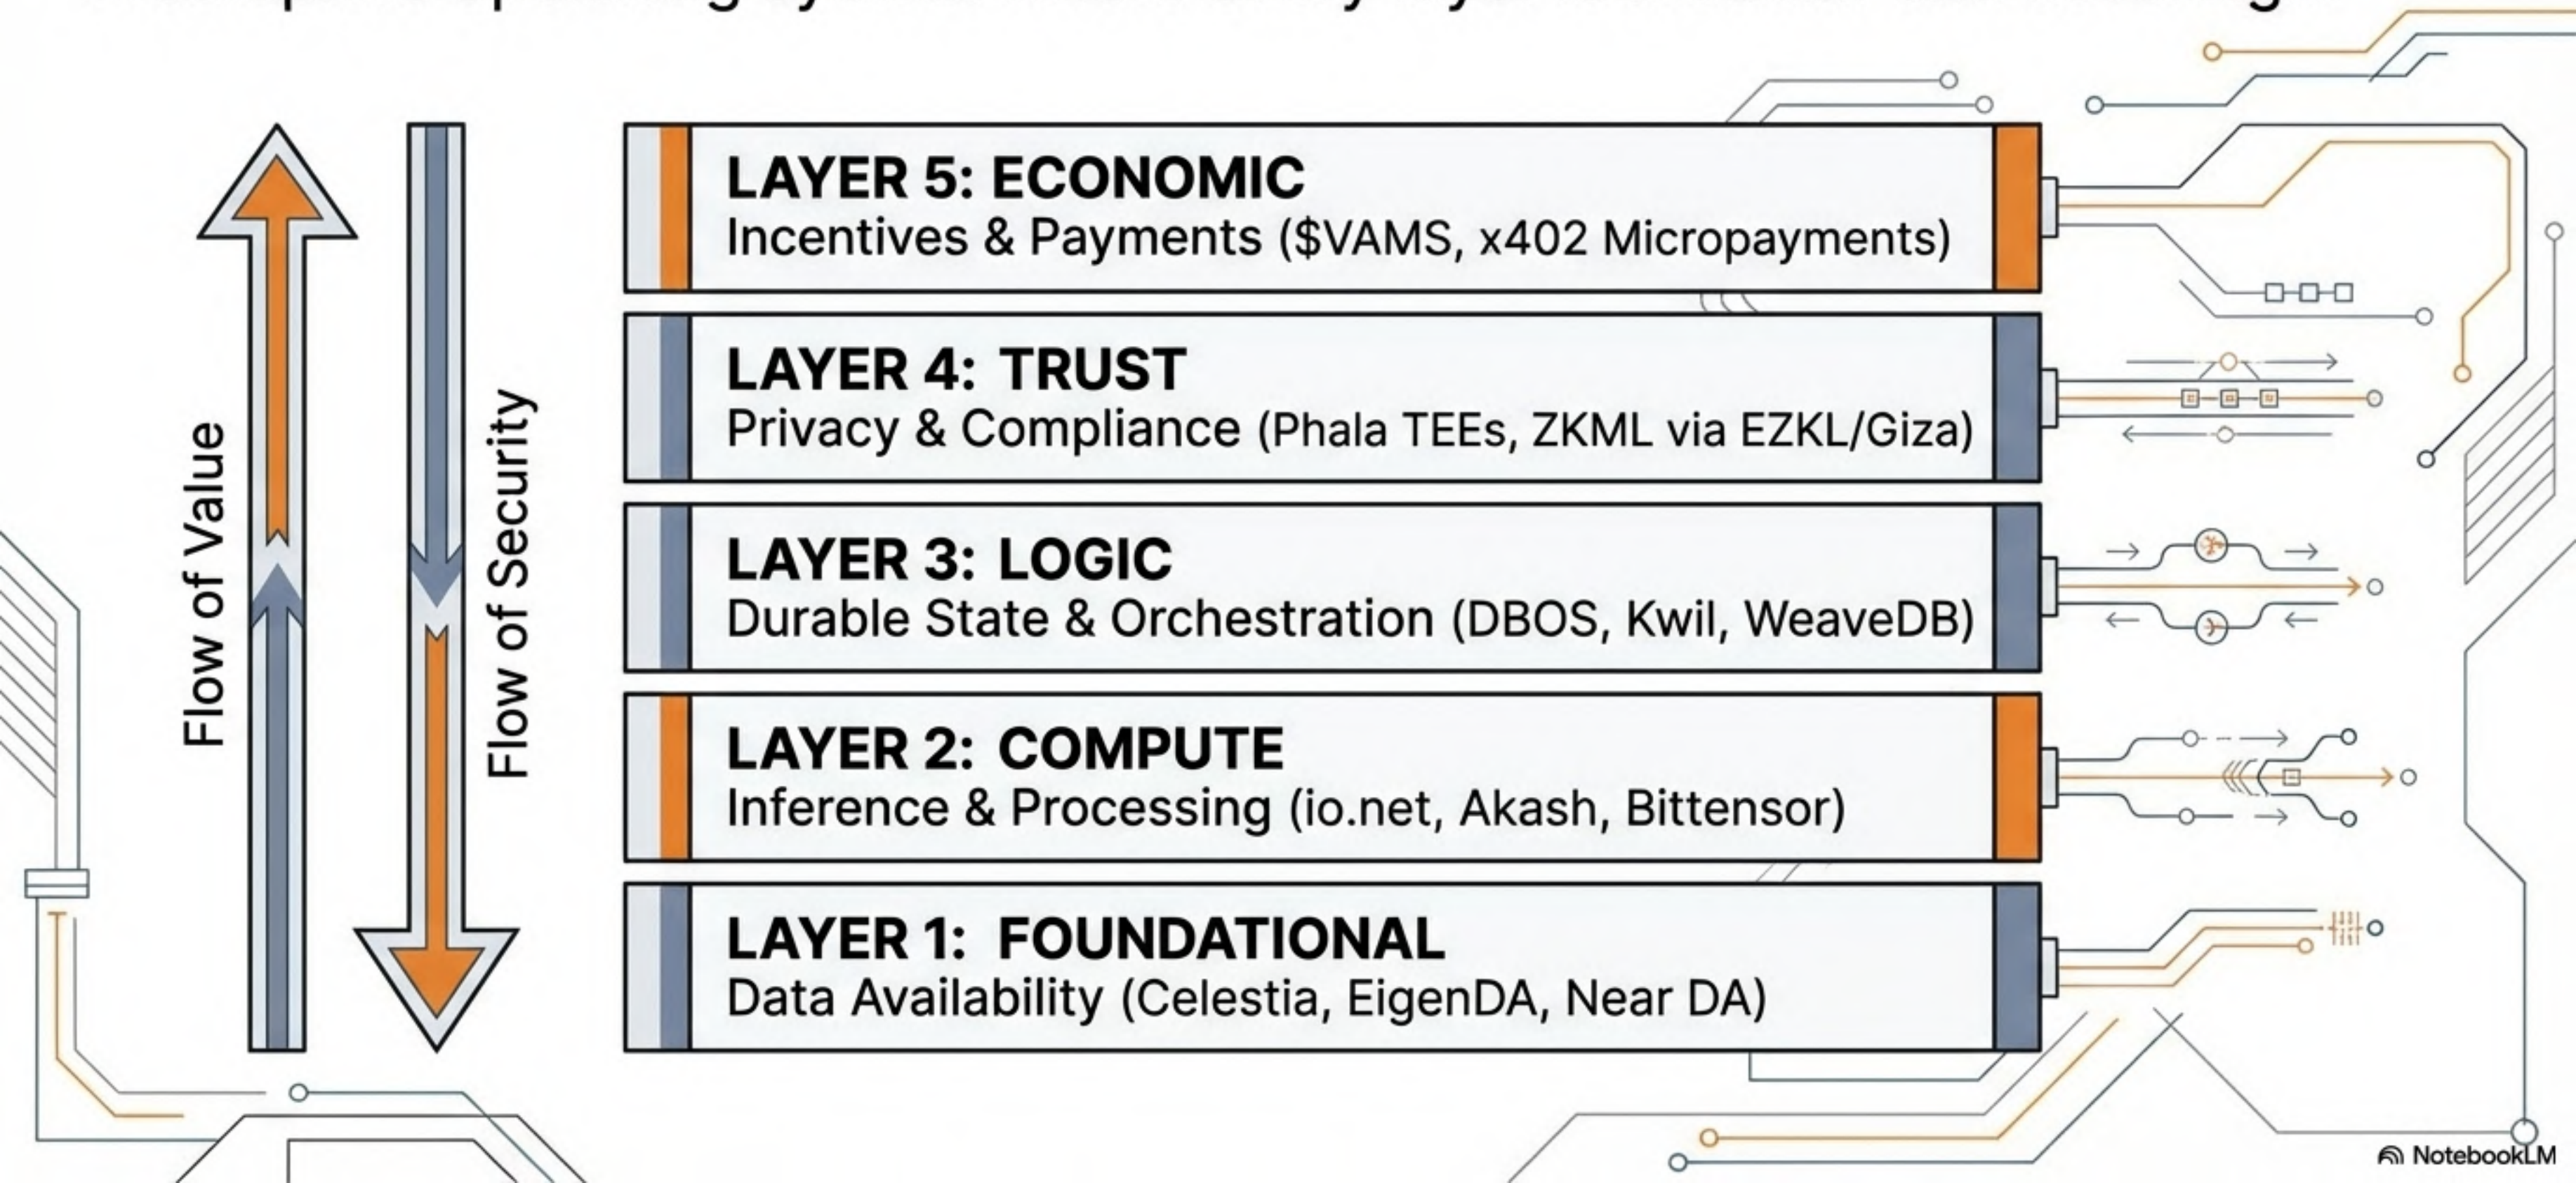

Programmatic access to decentralized resources. The AWS of Web3.

One SDK. One Token. Access to global infrastructure.

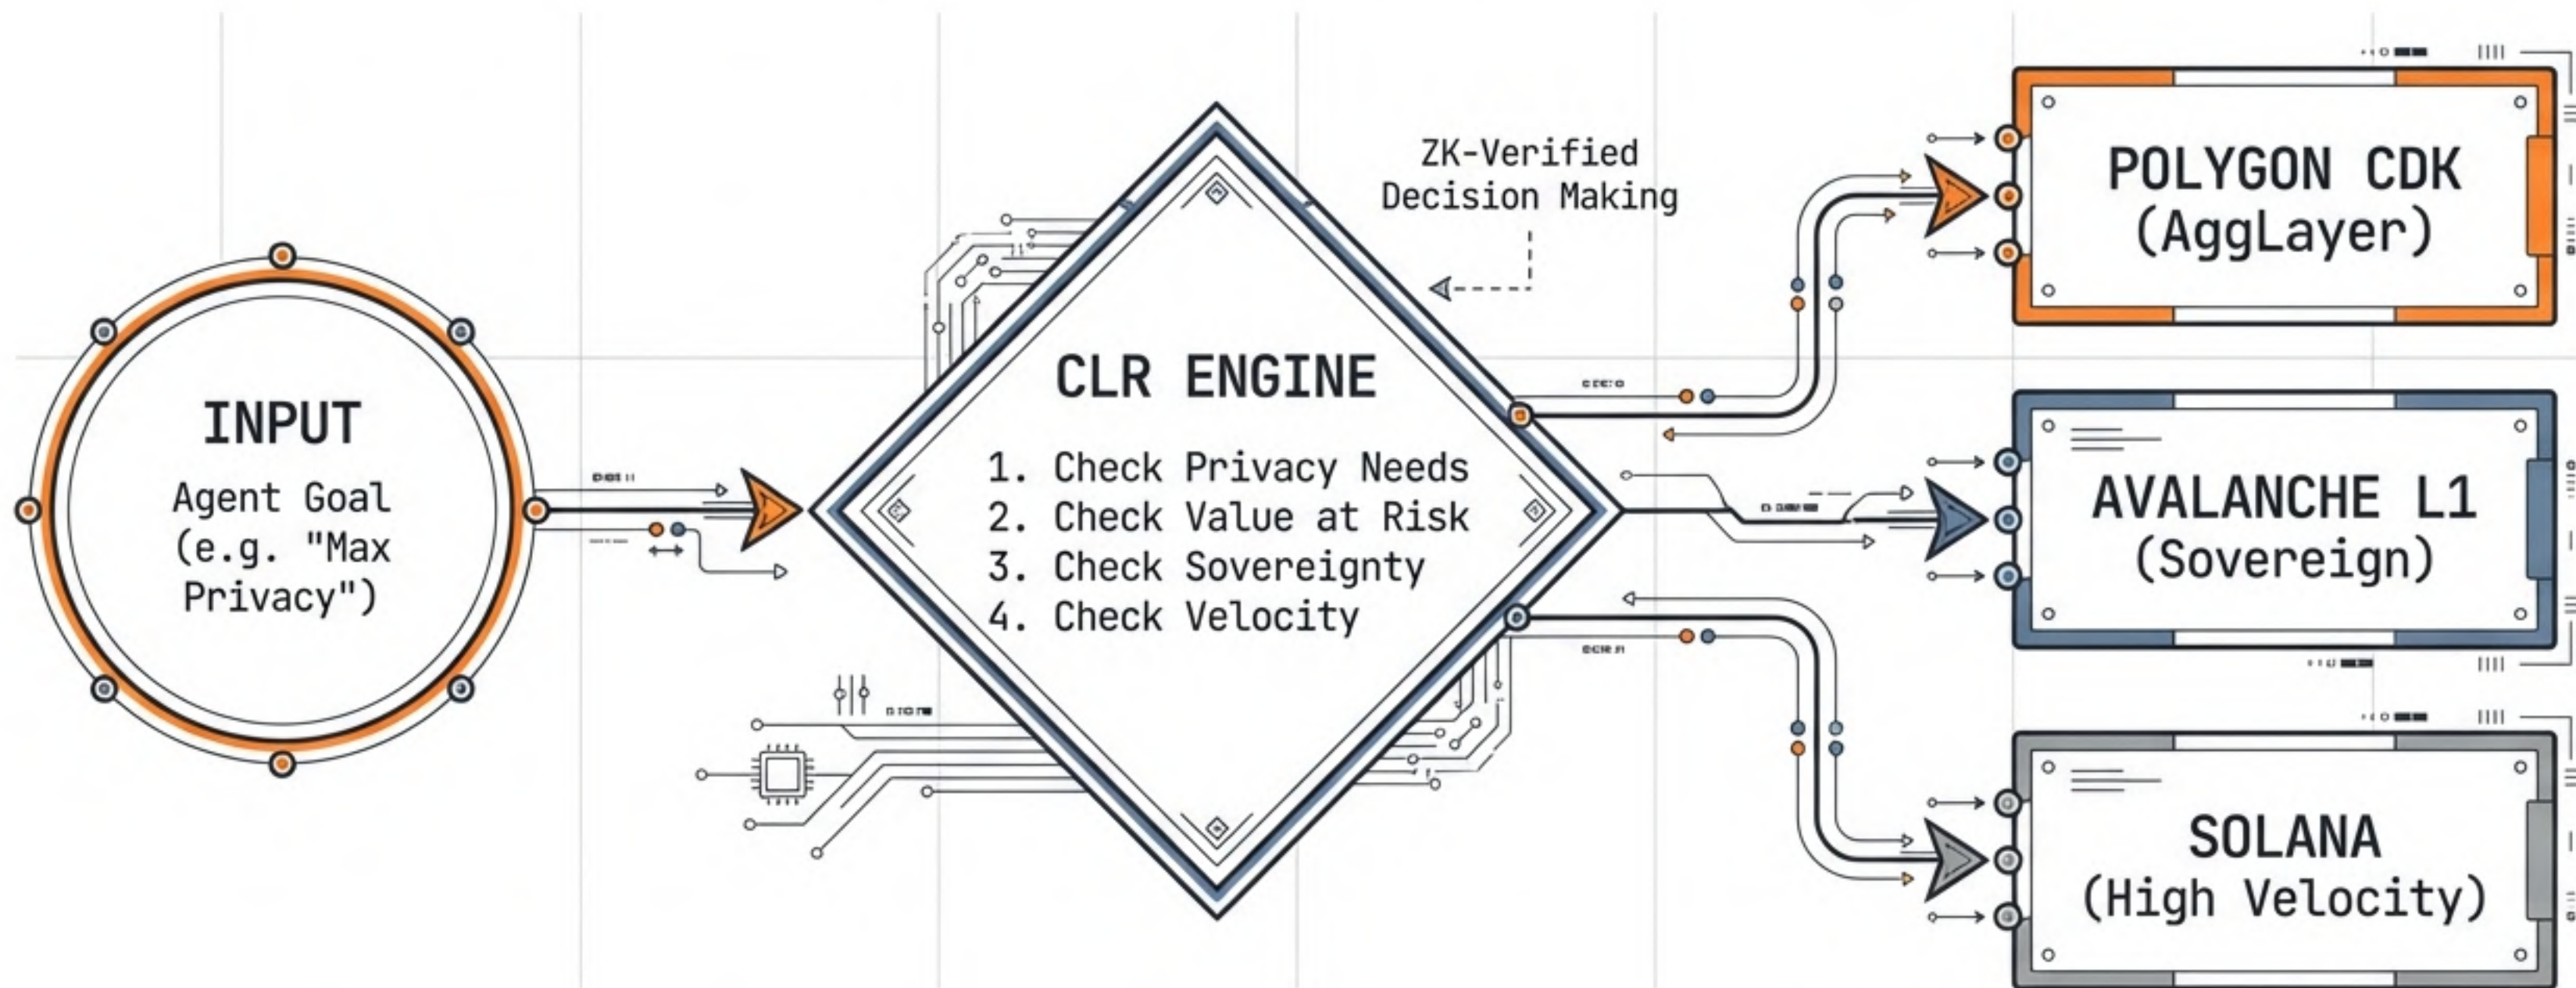

The Verifiable & Agentic Modular Stack

A complete operating system where every layer is modular and sovereign.

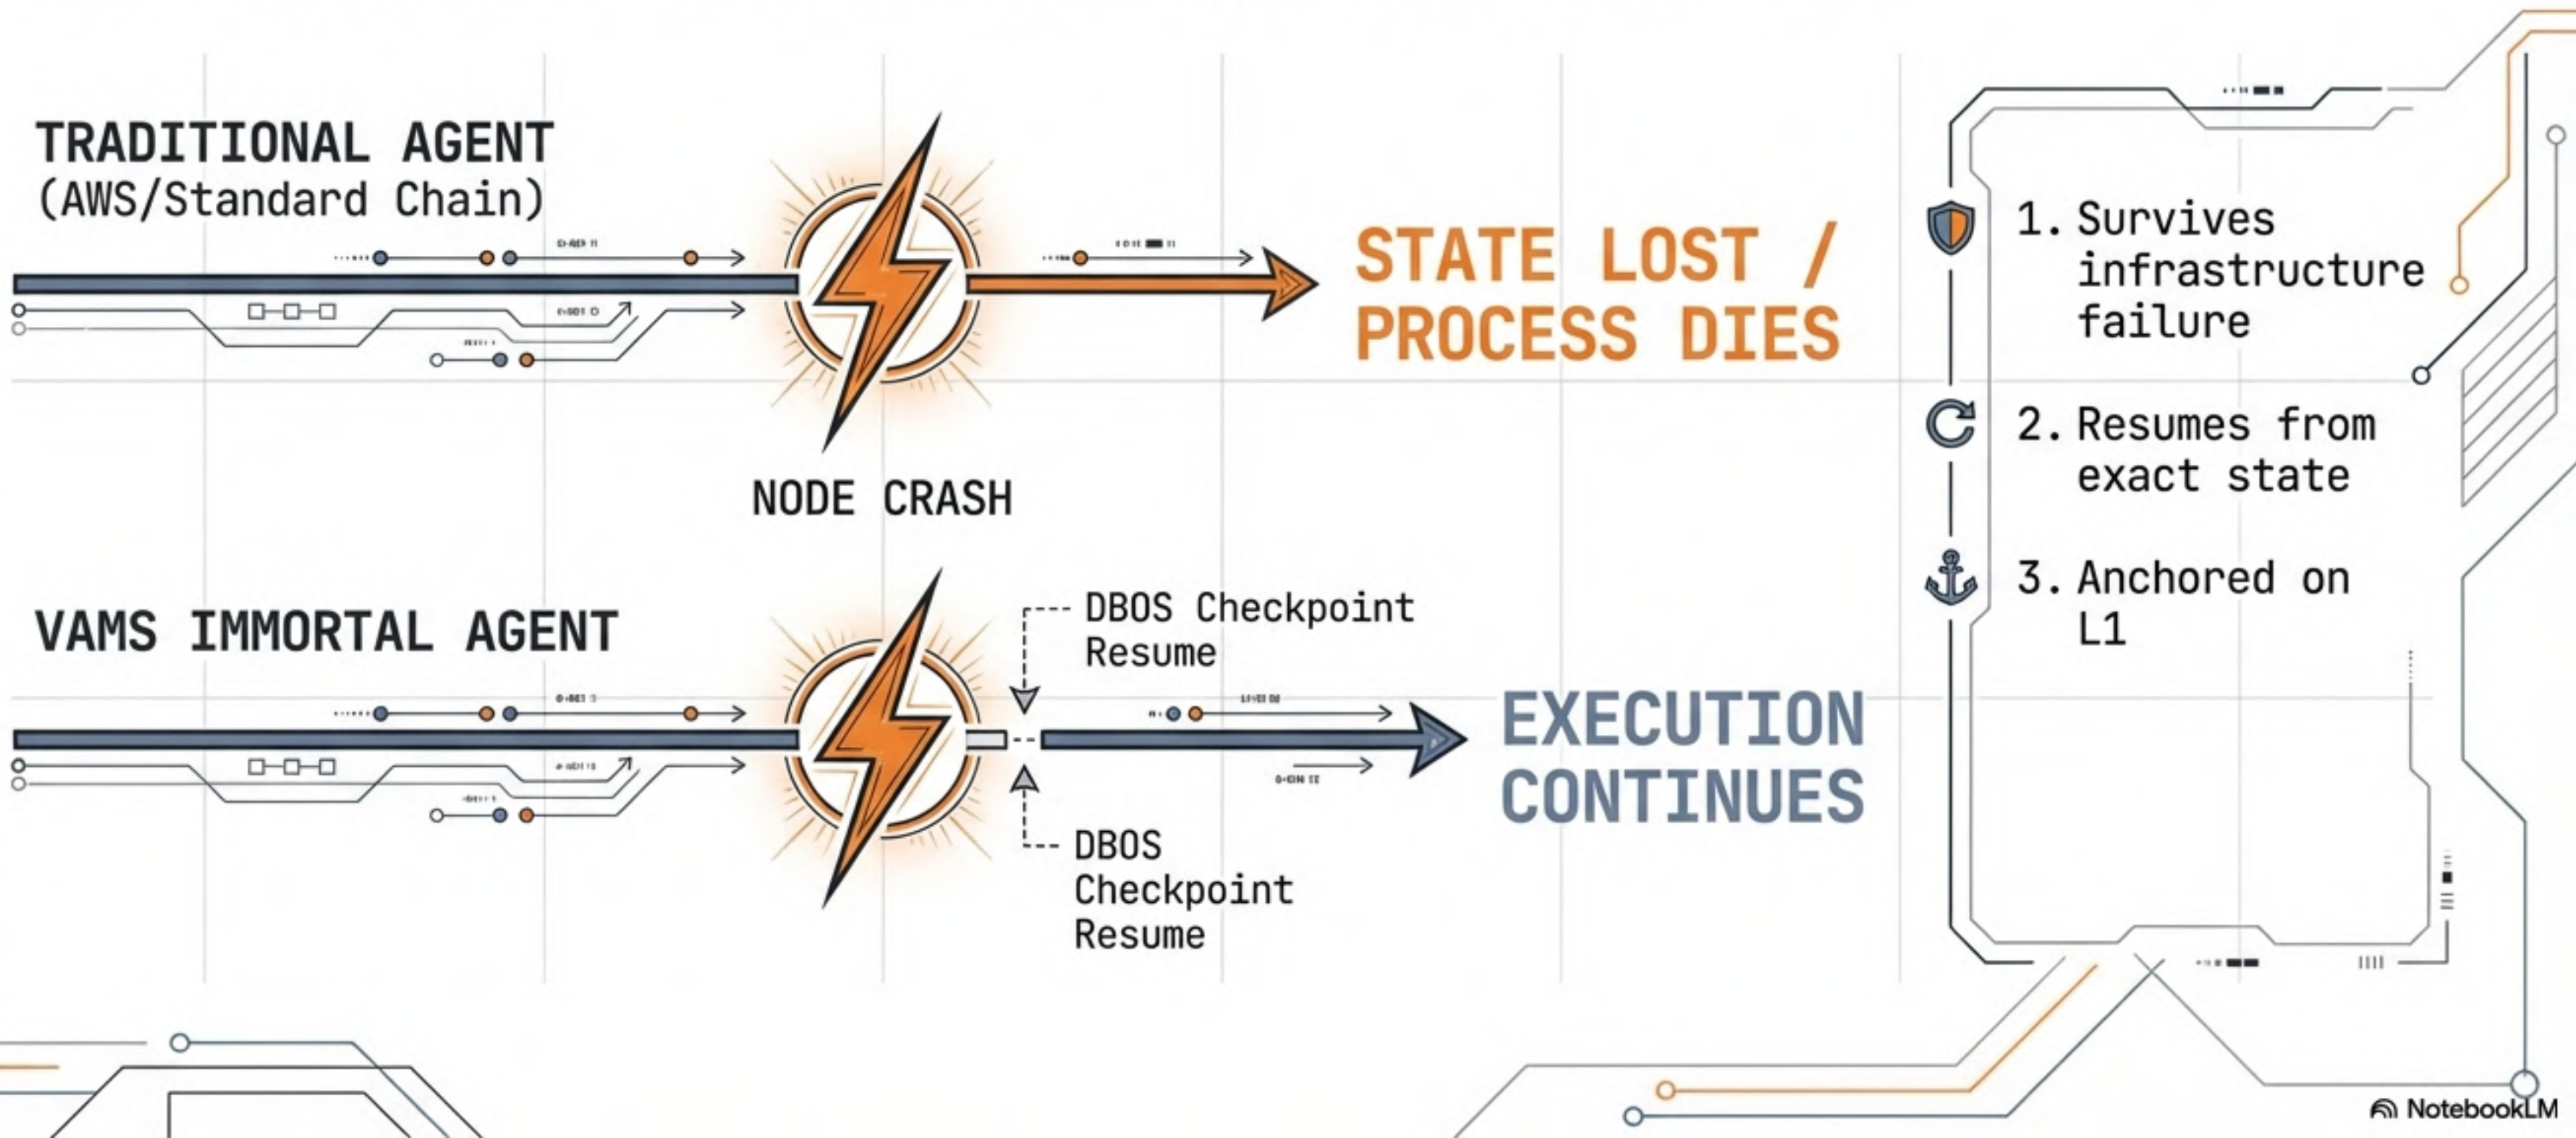

The Conditional L1 Router (CLR)

Automating chain selection with ZK-verified logic.

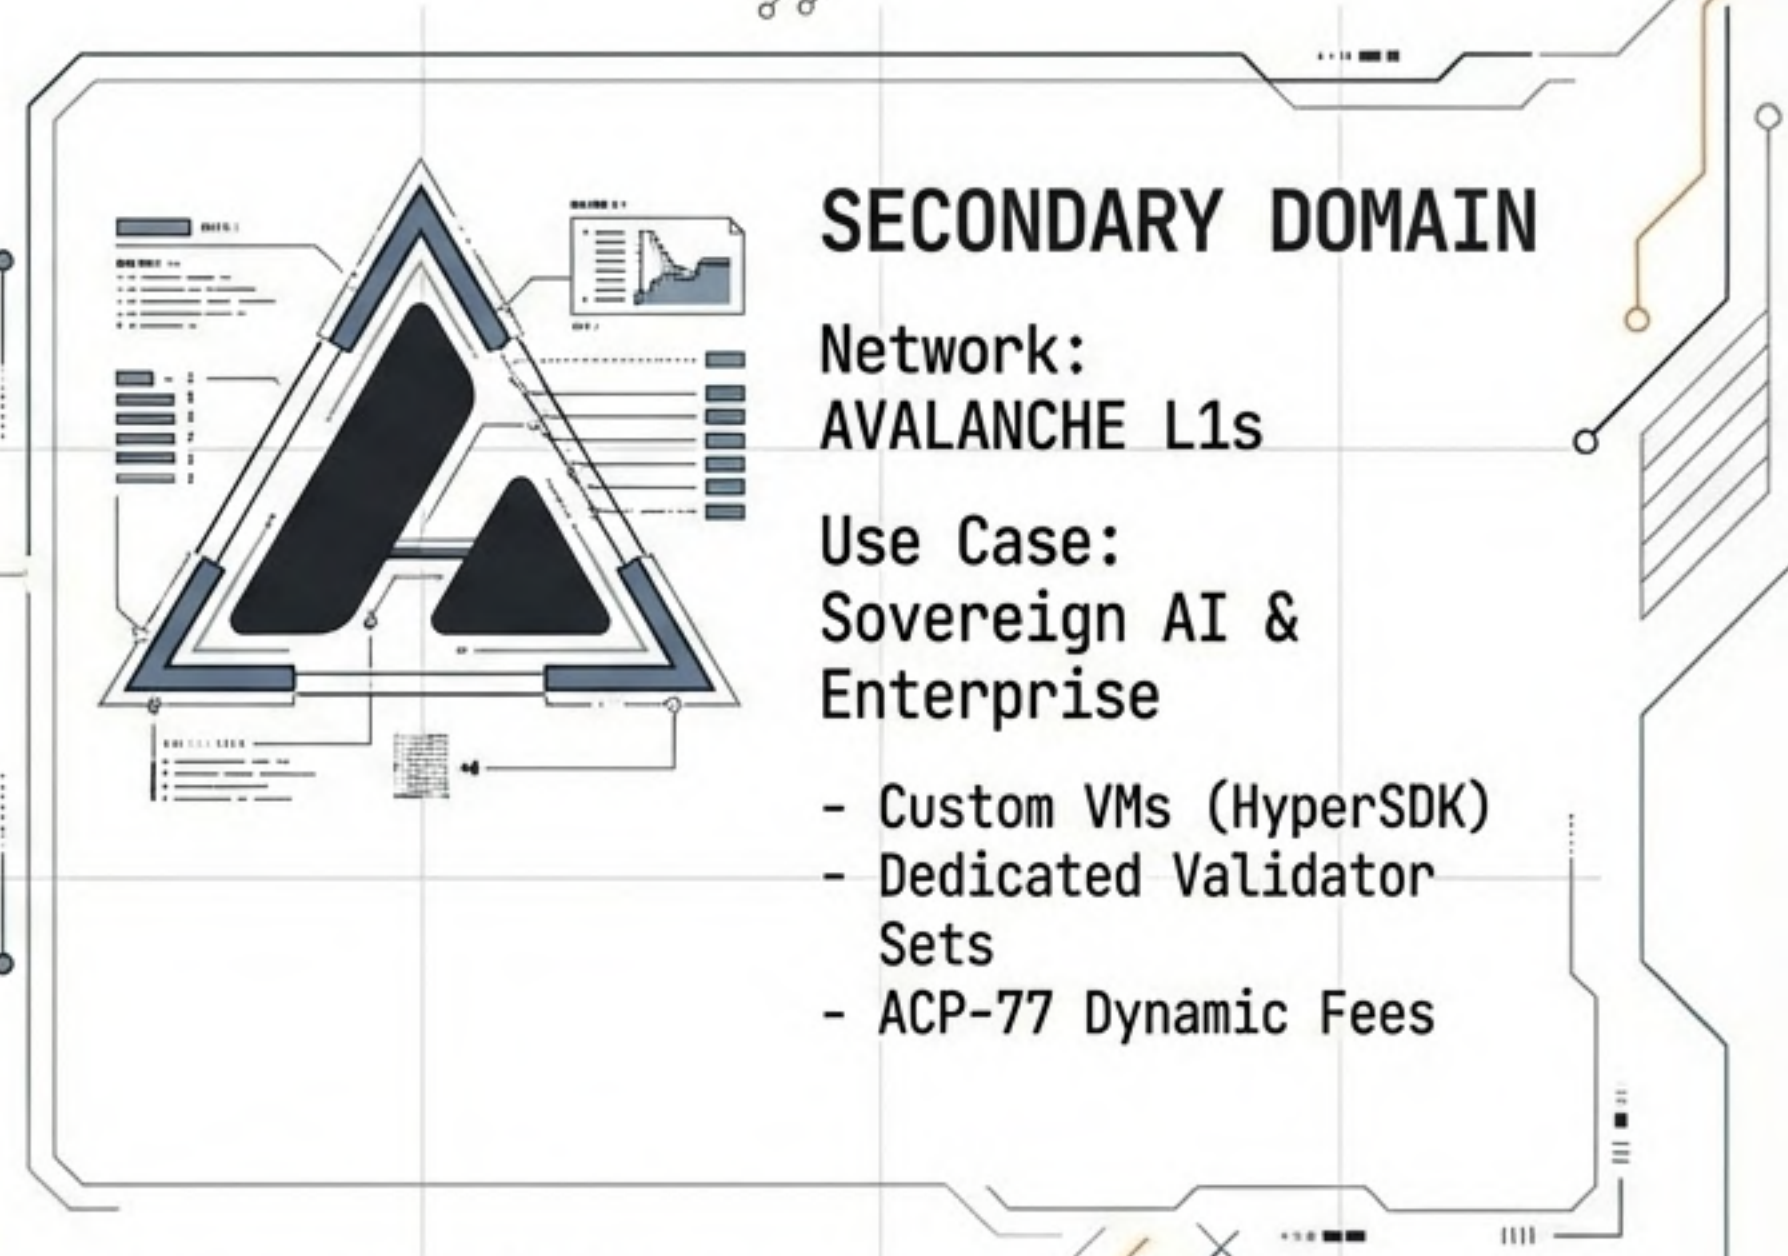

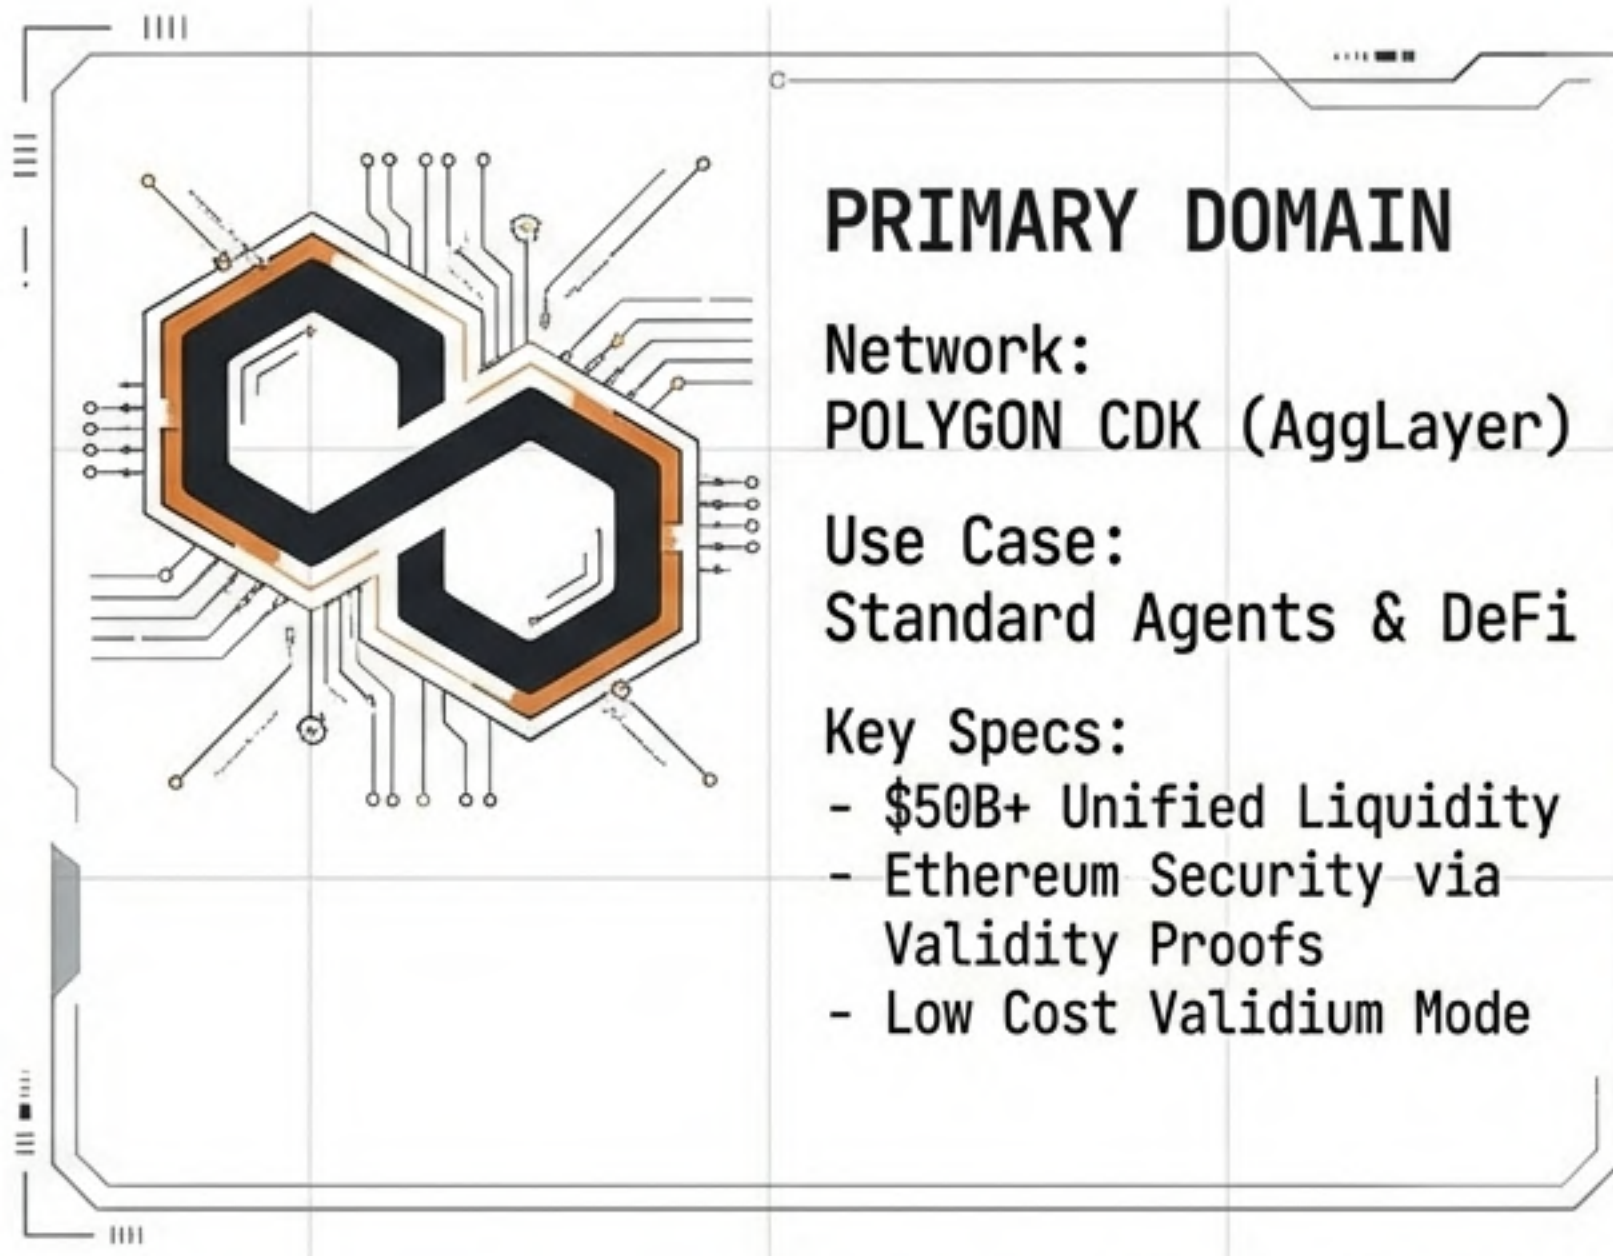

Immortal Agents & Crash-Proof Workflows

Leveraging DBOS to guarantee state persistence.

Dual Execution Domains

Optimizing for Liquidity vs. Sovereignty.

Agents are routed to the domain that matches their mission profile.

Built for Catastrophe

The Black Swan Matrix: Redundancy at every layer.

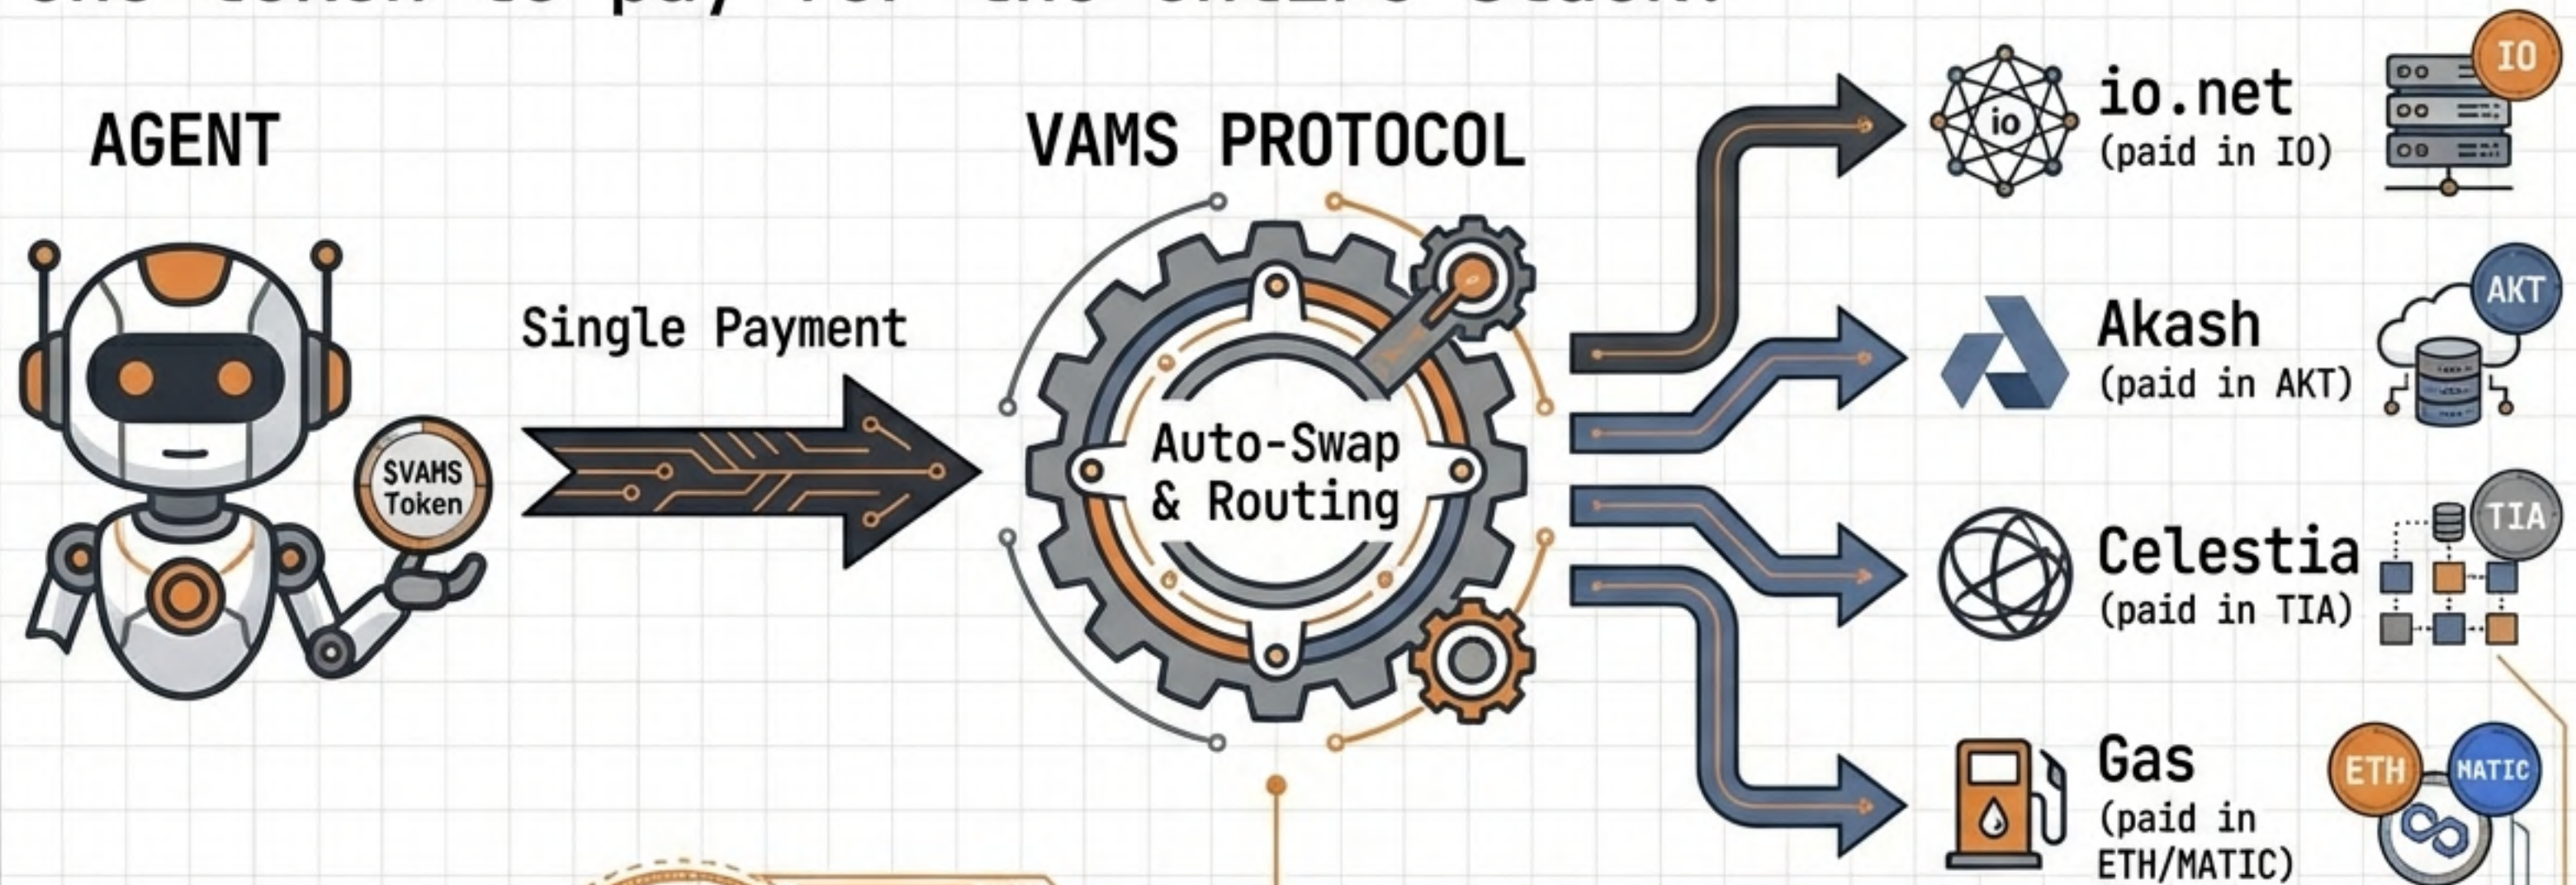

Failure Matrix

IF	THEN
Celestia Halts (DA Failure)	Route to EigenDA or Near DA
io.net Halts (Compute Failure)	Route to Akash or Render
Bridge/Network Halts	Local Queueing & Delayed Settlement
TEE Compromised	Multi-TEE Consensus (Intel + AMD + AWS)
L1 Price Collapse	Circuit Breakers & Insurance Fund

Economic Abstraction & \$VAMS

One token to pay for the entire stack.

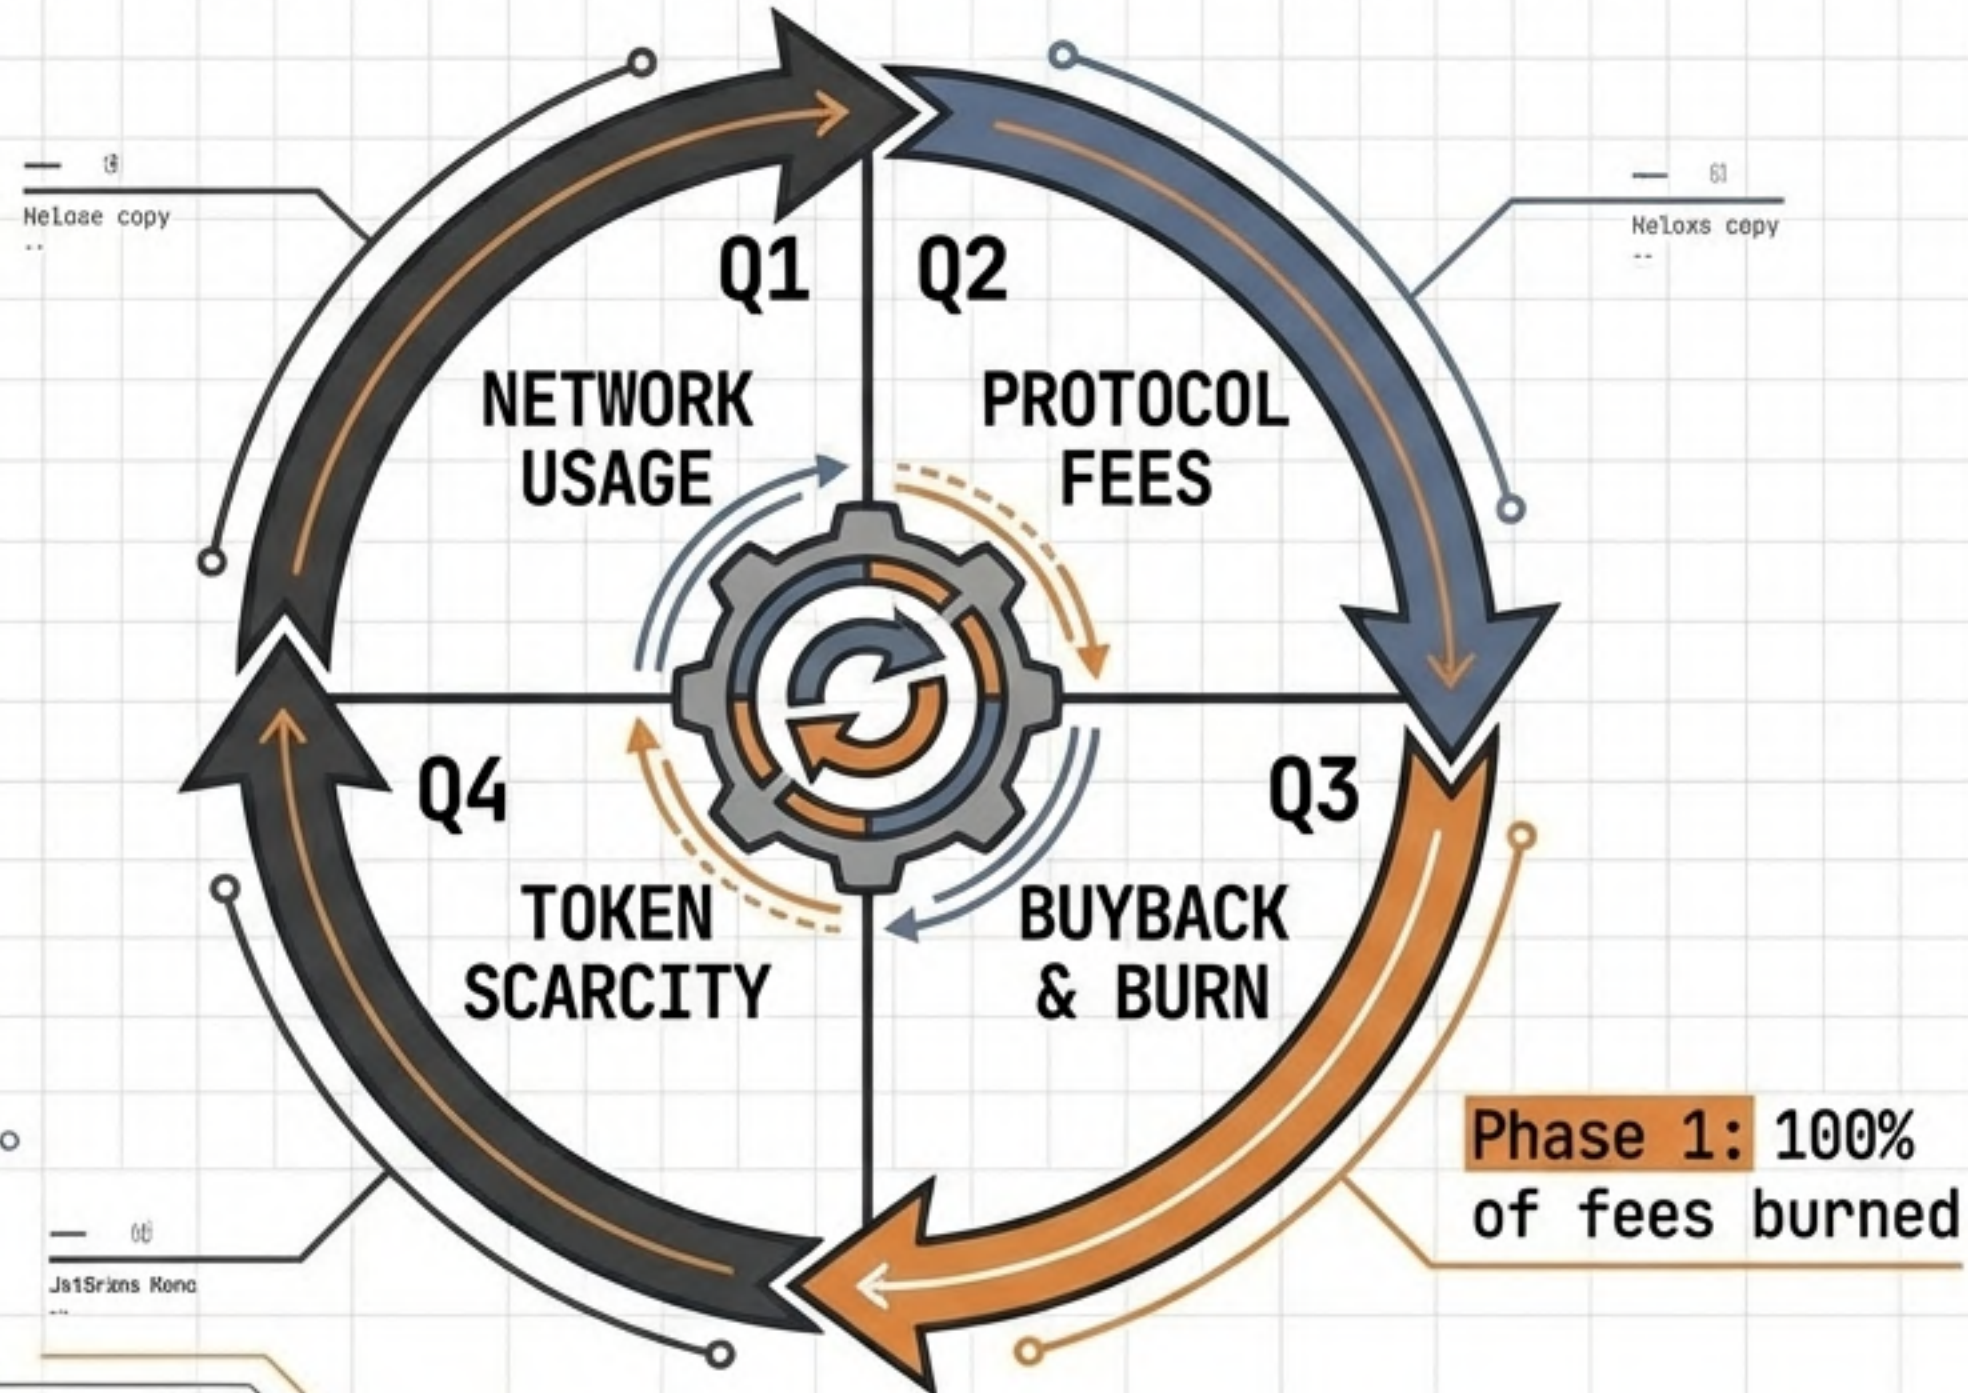

REVENUE STREAMS:

1. Protocol Fees: 0.1% - 0.5% per job
2. Gas Abstraction Premium: 5% convenience fee

Deflationary Design & Value Accrual

Fixed Supply. Aggressive Burns. AI Governance.

SIDEBAR DETAILS

SUPPLY CAP:
1 Billion \$VAMS

DYNAMIC TAO:
RL models govern
emission rates
based on demand.

Go-To-Market Strategy

The 'Vercel for Web3' approach: Selling to builders.

```
> IMPORT LangChain  
> IMPORT CrewAI  
> IMPORT AutoGPT  
  
> VAMS.deploy(agent_config)  
> STATUS: INTEGRATION ACTIVE
```

INITIAL VERTICALS

DeFAI

High-frequency trading agents using sub-second routing.

GAMING

Permanent NPCs and state for Avalanche L1 games.

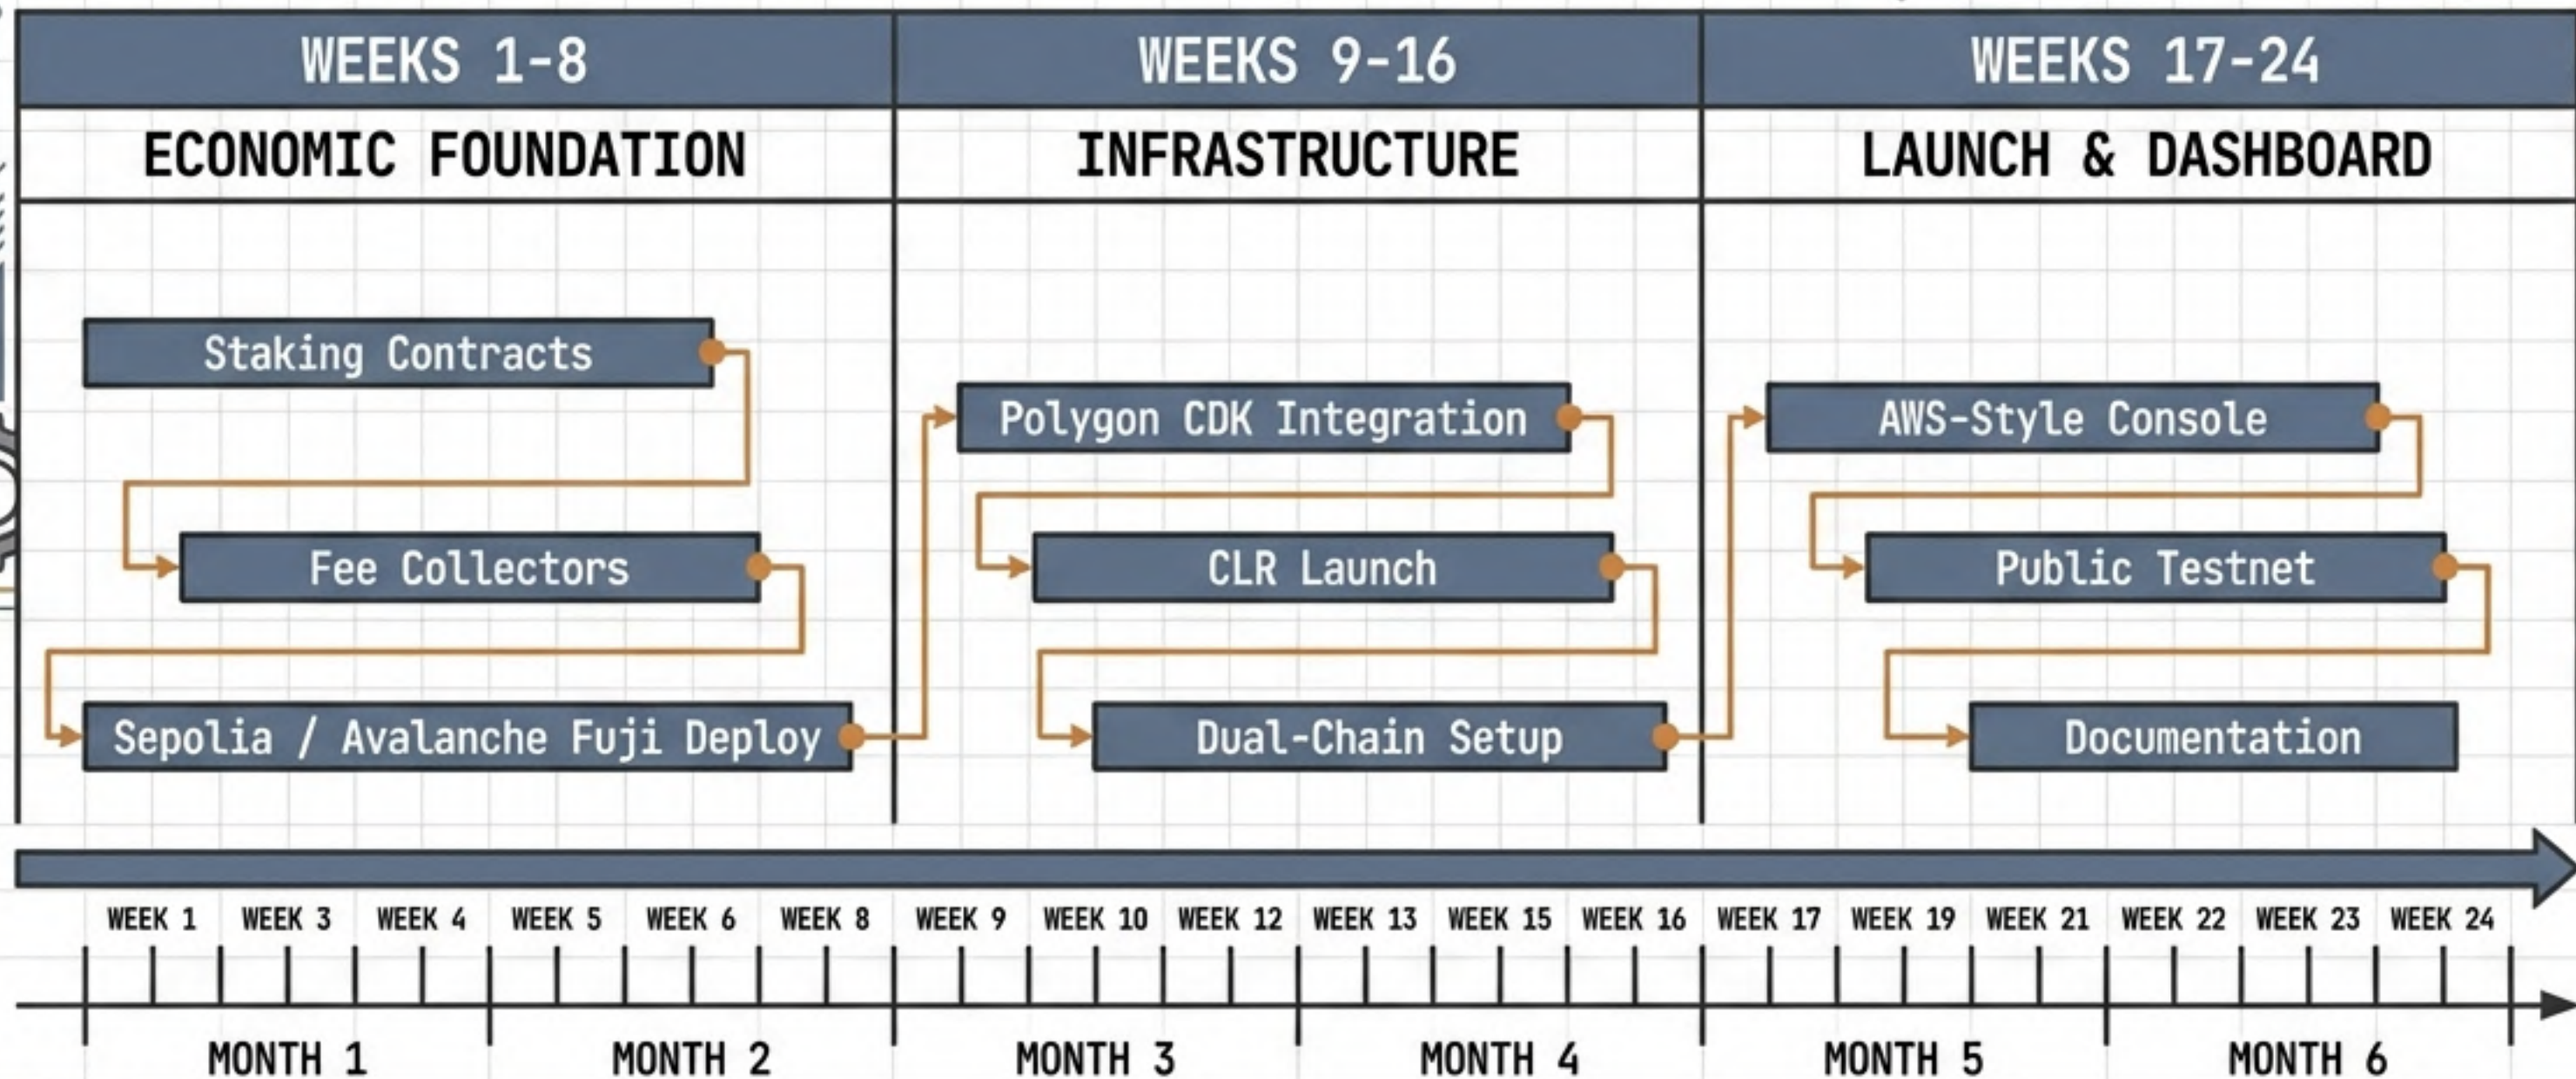

ENTERPRISE

Privacy-preserving supply chain agents via TEEs.

Roadmap: Architecture Locked

24-Week MVP Sprint Execution Plan.

CURRENT STATUS:
PRE-SEED /
SPEC COMPLETE

Building in Public

Radical transparency and community-first development.

FOUNDER & ARCHITECT

Aseem Chishti

6,100+

Lines of Technical Specifications Authored

Designed the 5-layer stack.

Expert in DePIN and Agentic Workflows.

HIRING PRIORITIES

- Rust / Solidity Engineers
- DAO Governance Experts
- AI / ML Infrastructure Specialists

Join the Sovereign Revolution

**In 5 years, AI Agents will outnumber humans.
They won't use Visa or AWS. They will use VAMS.**

THE ASK

- Strategic Partners
- 7% Token Allocation

WHY PARTNER?

- First-mover advantage on aggregated DePIN.
- Governance rights from Day 1.
